

## Exercise 8-3

### Data file closing

**Task:** Complete gaps in the application code to initialize and close DAQ module  
Use Bookmark manager to navigate through tasks in the application

*When the process stops, PLC module calls Stopn Log state of the Logger module.  
In this state, close the data file and change the state to **Idle**.*

#### 8-3.1 Update Stop Log state of the Logger module (Fig. 1):

- a) Close the TDMS file if the module is in Working mode
- b) set both **tdms file out** reference and **Path** to default
- c) change the status to **Idle**
